Notes to the Teacher or Parent

What sets *Mastering Essential Math Skills* apart from other books is its approach. It is not just a math book, but a *system* of teaching math. Each daily lesson contains five key parts: two speed drills, review exercises, teacher tips (Helpful Hints), a section containing new material, and a daily word problem. Teachers have flexibility in introducing new topics, but the book provides them with the necessary structure and guidance. The teacher can rest assured that essential math skills are being systematically learned.

With so many concepts and topics in the math curriculum, some of these essential skills are easily overlooked. This easy-to-follow math program requires only twenty minutes of instruction per day. Each lesson is concise, and self-contained. The daily exercise help students to not only master math skills, but also to maintain and reinforce those skills through consistent review—something that is missing in most math programs. Skills learned in this book apply to all areas of the math curriculum, and consistent review is built into each daily lesson. Teachers and parents will also be pleased to note that the lessons are quite easy to correct.

The book is divided into eight chapters, which cover whole numbers, fractions, decimals, percentages, integers, geometry, charts and graphs, and problem solving.

Mastering Essential Math Skills is based on a system of teaching that was developed by a math instructor over a twenty-year period. This system has produced dramatic results for students. The program quickly motivates students and creates confidence and excitement that leads naturally to success.

Please read the following “How to Use This Book” section and let this program help you to produce dramatic results with your children or math students.

How to Use this Book

Mastering Essential Math Skills is best used on a daily basis. The first lesson should be carefully gone over with the students to introduce them to the program and familiarize them with the format. A typical lesson has been broken down on the following pages into steps to suggest how it can best be taught. It is hoped that the program will help your students to develop an enthusiasm and passion for math that will stay with them throughout their education.

As you go through these lessons every day you will soon begin to see growth in the students’ confidence, enthusiasm, and skill level. The students will maintain their mastery through the daily review.

In school, the book is best used during the first part of the math period. The structure and format seem to naturally condition the students to “think nothing but math” from the moment class begins. The students are ready to “jump into the lessons” without any prompting or motivating needed from the teacher. This makes for a very smooth and orderly start each day.

Also, once you have finished the daily lesson, there will still plenty of time to explain related topics, or work on new topics in the basic test or through other sources.

Step 1

Students open their books to the appropriate lesson and begin together. Have students first go to the review exercises, working each problem and showing all their work. If students finish early, they are to check their work in the review section.

Step 2

When you feel that enough time has been spent on the review exercises (usually two to three minutes), call out "Time." The next step is to go to the speed drills. A good signal is to say, "Get ready to add." The students go to the addition drill and wait for the next signal. Then say, "The number to add is '()'." At this stage the students place the given number inside the addition circle and, as quickly as possible, write all the sums in the appropriate space outside the perimeter of the circle. As students complete the drill, have them drop their pencils and stand or signal in some appropriate way. When enough time has been given, say, "Time." Students then correct the drill as the answers are read aloud by the teacher or a student. The same process is used for the multiplication drill. It is amazing how motivating these speed drills can become in helping students to master their addition and multiplication facts.

Step 3

After the speed drills, work through the review problems with the class. Work the problems on the board or overhead and go through them step-by-step with the students, drawing responses and asking questions as you go. Allow the students to check their own work in this section. This section provides consistent review and reinforcement of topics that the class learns.

Step 4

After going through the review exercises, give a short introduction of the new material. This is where the teacher's unique style and skills come into play. Appropriate concepts, vocabulary, and skills can be introduced on the blackboard or overhead. This should require only a few minutes.

Step 5

After a brief introduction of the new material, go over the “Helpful Hints” section with the class. Be sure to point out that it is often helpful to come back to this section as the students work independently. This section often has examples that are very helpful to the student.

Step 6

After going through the “Helpful Hints” section, do the two sample problems. It is highly important to work through these two problems with the class. The students can model the techniques that are discussed and demonstrated by the teacher. Go through the steps on the board or overhead, and the students can write them directly into their books. Working these sample problems together with the class can prevent a lot of unnecessary frustration on the part of the students. In essence, in working them together, each student has successfully completed the first two problems of the lesson. This can assist in developing confidence as a routine part of each daily lesson.

Step 7

Next, allow the students to complete the daily exercises and the word problem of the day. Make it a point to circulate and offer individual help. If it is necessary, work another example or two on the board with the entire class. Also, reading the word problem of the day together with the class before they work it independently may be very beneficial.

Step 8

Last, collect the books, correct them and return them the next day. It may sometimes be appropriate to correct them with the students.

 7. $3\frac{2}{9}$
 8. $\frac{1}{2}$
 9. $3\frac{7}{10}$
 10. $4\frac{2}{5}$
- Problem Solving: $2\frac{1}{2}$ yards

Page 29

1. $\frac{1}{3}$
 2. $\frac{1}{2}$
 3. $5\frac{1}{2}$
 4. 68
 - S. $2\frac{1}{2}$
 - S. $2\frac{2}{3}$
 1. $2\frac{1}{5}$
 2. $3\frac{1}{3}$
 3. $3\frac{2}{3}$
 4. $5\frac{1}{2}$
 5. $1\frac{2}{5}$
 6. $1\frac{1}{2}$
 7. 3
 8. $1\frac{1}{4}$
 9. $3\frac{2}{3}$
 10. $1\frac{3}{5}$
- Problem Solving: $5\frac{1}{3}$ hour

Page 30

1. $\frac{1}{5}$
 2. 1
 3. $2\frac{2}{3}$
 4. $\frac{1}{3}$
 - S. $6\frac{1}{6}$
 - S. $2\frac{1}{2}$
 1. $\frac{3}{5}$
 2. $\frac{3}{4}$
 3. $1\frac{1}{9}$
 4. $\frac{1}{4}$
 5. $3\frac{3}{4}$
 6. $4\frac{1}{3}$
 7. $6\frac{1}{5}$
 8. $3\frac{2}{3}$
 9. $\frac{3}{5}$
 10. $1\frac{1}{2}$
- Problem Solving:
 $3\frac{2}{3}$ pounds

Page 31

1. $\frac{5}{7}$
 2. $\frac{1}{2}$
 3. $4\frac{1}{2}$
 4. $2\frac{2}{3}$
 - S. 12
 - S. 24
 1. 10
 2. 8
 3. 9
 4. 15
 5. 10
 6. 16
 7. 20
 8. 10
 9. 14
 10. 30
- Problem Solving: 2,800 miles

Page 32

1. 201
 2. 552
 3. 253
 4. 461
 - S. $\frac{7}{12}$
 - S. $\frac{3}{10}$
 1. $\frac{11}{12}$
 2. $\frac{1}{6}$
 3. $1\frac{3}{10}$
 4. $\frac{7}{9}$
 5. $\frac{1}{6}$
 6. $\frac{1}{2}$
 7. $\frac{11}{15}$
 8. $\frac{3}{4}$
 9. $\frac{1}{2}$
 10. $1\frac{1}{6}$
- Problem Solving:
 $1\frac{5}{8}$ gallons

Page 33

1. $2r9$
 2. $\frac{3}{4}$
 3. $\frac{7}{12}$
 4. $\frac{1}{6}$
 - S. $5\frac{9}{10}$
 - S. $8\frac{1}{10}$
 1. $5\frac{5}{6}$
 2. $5\frac{7}{10}$
 3. $5\frac{13}{20}$
 4. $4\frac{1}{12}$
 5. $5\frac{3}{4}$
 6. $7\frac{5}{6}$
 7. $3\frac{7}{10}$
 8. $5\frac{11}{15}$
 9. $5\frac{11}{15}$
 10. $5\frac{9}{20}$
- Problem Solving: 360 parts

Page 34

1. $\frac{13}{14}$
 2. $5\frac{1}{2}$
 3. $1\frac{3}{4}$
 4. $1\frac{2}{3}$
 - S. $2\frac{1}{6}$
 - S. $1\frac{7}{10}$
 1. $1\frac{5}{6}$
 2. $3\frac{1}{15}$
 3. $2\frac{5}{12}$
 4. $3\frac{7}{12}$
 5. $2\frac{1}{4}$
 6. $2\frac{3}{10}$
 7. $2\frac{5}{6}$
 8. $6\frac{2}{15}$
 9. $2\frac{1}{8}$
 10. $3\frac{3}{10}$
- Problem Solving: 30 students

Page 35

1. $\frac{2}{3}$
 2. $2\frac{2}{5}$
 3. 10
 4. $\frac{11}{15}$
 - S. $2\frac{1}{4}$
 - S. $5\frac{1}{4}$
 1. $\frac{4}{5}$
 2. $\frac{11}{12}$
 3. $\frac{1}{10}$
 4. $2\frac{4}{5}$
 5. $6\frac{1}{3}$
 6. $1\frac{7}{10}$
 7. $6\frac{1}{6}$
 8. $1\frac{1}{2}$
 9. $\frac{5}{8}$
 10. $5\frac{1}{10}$
- Problem Solving:
 $2\frac{3}{10}$ dollars
